- ***Notes***

Wood is a natural material that has inherent variations in its graining and color. Because of this, each piece of wood or veneer accepts stain differently. This is part of what contributes to the unique beauty of wood. In addition, color difference or changes in the wood can occur over time with exposure to sunlight, harsh chemicals, smoke, and extreme heat or moisture. These are important characteristics of wood that should be taken into consideration. Additional information pertaining to each specific type of wood species is listed below.

Cherry is a close-grained hardwood with rich, varying colors ranging from light pink to deep browns. Undulating waves and curls in the grain are natural and desirable qualities found in this wood. As Cherry ages, the wood becomes darker and this is especially apparent when exposed to direct sunlight. Other naturally occurring characteristics of this elegant wood include pin knots and mineral streaks.

Maple has a smooth, even texture and is a more uniformed close-grained wood. Its natural colors range from a creamy white to dark reddish-brown tones. This varying palette can occur within a single door. Maple may contain mineral streaks, wavy or curly graining, and fine brown lines; all of which are acceptable characteristics of Maple's natural beauty.

MDF, or Medium-Density Fiberboard, is an extremely stable wood composite material made from recycled wood fibers and resin. Because of its inherent stability, it's ideal for painted doors and drawer fronts. It is resistant to changes in heat and humidity unlike painted wood doors which are very susceptible to contracting & expanding. MDF painted doors create a beautiful look with a long lasting, durable finish.

STAIN

Our cabinets are finished with a premium water-based UV cured finish. It is environmentally friendly and provides excellent durability and performance. The lusturious finish enhances the natural grain of the woods while providing a consistent, elegant appearance, even with darker stains. Because it is a UV-cured finish, the color will less likely fade over time which helps to maintain the beauty of your investment.

PAINT

Our paint finishes are also water-based UV cured finishes, with the same eco-friendliness and performance. It is a durable, opaque color that emphasizes and accentuates the rich detailing of each door. It also will less likely fade over time and maintain a consistent, elegant look to the cabinetry.

GLAZES*

Glazes are a hand applied finish that accentuates the unique detailing on the doors and drawer fronts. It collects in the corners, grooves, and recesses and because of this, the overall look varies from subtle to dramatic based on the door style selected. Face frames, ends, panels, and selected moldings will not receive glazing. Some slab drawer fronts will not receive any glazing due to the lack of detail. For further clarification please contact your rep. or designer.

VINTAGE*

This is a translucent glaze brushed over the entire door and drawer front. The end result is a tonal change to the color and the subtle appearance of brush strokes giving an aged, vintage effect. Like the regular glaze, some cabinet components and mouldings may not receive the effect so please contact your rep. or designer for clarification.

DISTRESSING*

Distressing is offered in five colors: Auburn Black Distressed, Black Distressed, Chestnut Distressed, Eggshell Vintage Distressed, and Walnut Black Distressed.

Auburn Black Distressed, Chestnut Distressed & Walnut Black Distressed feature hand applied distressing characteristics like bird pecks and scratches meant to replicate an aged look. This is further accentuated by the addition of glazing which highlights the appealing imperfections.

Black Distressed and Eggshell Vintage Distressed feature a sandthrough technique which exposes the underlying wood and replicates a time-worn effect.

*** Specialty finish techniques in particular will vary within individual doors and throughout the entire room. It is recommended that a sample door and drawer front be ordered to illustrate the unique characteristics inherent within each finish. Inconsistencies should be expected and are acceptable qualities featured in the specialty finishes.**
